

INCIDENT AND ACCIDENT INVESTIGATIONS

TARGET GROUP

The course is intended for all Management and Operational level staff in shipping industry. The course is designed to prepare attendees to become Accident Investigation Team Leaders.

INCIDENT AND ACCIDENT INVESTIGATIONS COURSE.

Most organizations have accident investigation procedures.

However, these procedures are often based on a blame culture and do not inspire the investigator to find and correct the defects in the management system (root caused) that allowed the hazards to exist and the accident to occur.

Several industries have adopted excellent accident investigation and analysis techniques. It is a basic function to locate and define the operational errors that allow accidents to occur. Competence in the application of modern accident/incident investigation tools will assist to learn and to prevent the recurrence of accidents and to evaluate the extent and location of management defects (root-causes), which contributed to the accident event.

OBJECTIVES OF THE COURSE.

A trainee successfully completing the course will be able to:

- Define the accident / incident event
- Understand modern accident causation theories
- Define all accident investigation and analysis stages
- Carry out initial actions in response to accident and incidents
- Gather evidence and data relevant to the accident investigation
- Interview witnesses
